TX Albugon is a recombinant human ***glucagon*** - **like*** peptide-1 and ***albumin*** **fusion*** protein, which lowers blood glucose, under development by Human Genome Sciences (HGS) for the treatment of diabetes and obesity (Direct communication, HGS, 6 May 2003).

Marketing

GlaxoSmithKline has exclusive worldwide rights for all therapeutic and prophylactic applications, in return for an upfront fee, milestone payments and royalties.

Preclinical

It is in late preclinical studies (press release, HGS, 26 Oct 2004). In normal mice with impaired glucose tolerance, db/db mice and Zucker diabetic fatty rats, a single dose of Albugon restored near-normal glycaemic control over a 24hr period. In db/db mice, a strong correlation existed between Albugon plasma concentrations and response to oral glucose challenge. The intact molecule had a t1/2 of 11hr in mice and 3 days in monkeys (63rd Meet Am Diabetes Assoc (New Orleans), 2003, Abs 479). Updated by JB on 27/10/2004.
